1 Introduction, objective and admission

For students of the five Research Master programs, the admission criteria in this appendix apply. In all situations in which the provisions do not provide, the Program director of the Research Master courses decides.

1.1 Objective of the Research Master program

In the Research Master Program students acquire the following skills and knowledge:

- The student has a solid knowledge base with regards to the domain of the RM and the relevant research methods and instruments within that field.
- The student is able to translate knowledge and insight, corresponding research methods and instruments into adequate research questions and hypothesis driven experiments to answer these questions.
- The student is able, under supervision, to complete the scientific cycle and demonstrates through the appropriate products his or her contribution to science and its impact to society.
- The student is, given a specific question, able to find relevant literature, summarize it and turn it into an answer to the research question.
- The student acts from the scientific values and principles and has adopted *the* scientific attitude.
- The student perseveres when an experiment fails or the results don't answer the research question, using different methods to solve the problem if needed.

1.2 Admission requirements per Research Master program

1.2.1 General

For all Research Masters the Admissions Committee determines whether a student is admitted to the program. Reasons will be given for the decision not to admit a student on his or her request.

Candidates who meet the selection criteria may be invited by the Admissions Committee for an additional interview (in person or via the internet) and an entrance examination.

Lateral entry admission is possible. This means that students of the Erasmus MC or other institutes can be placed in the second year of the Master of Science program. These students must have successfully completed the first year of another equivalent Research Master, or have obtained comparable knowledge elsewhere. Requests for exceptions to lateral entry admission should be submitted to the Examination Board by the Program Director. This request must be honored before the student may be admitted.

Candidates must demonstrate that they meet the selection requirements for written and spoken English. International applicants from countries where English is not the official language and who have not had any English-language education at secondary school and university must take a TOEFL, IELTS or Cambridge proficiency test. The result of the TOEFL test must be at least

575 (paper based) with partial scores of at least 57, or a score of 232 (computer based) with partial scores of at least 23. The applicant must achieve a minimum score of 90 for the online test with a minimum partial score of 22. The achieved Cambridge proficiency level should be C1. The result of the IELTS test must be at least 6.5 with partial scores of at least 6.0. Candidates who have completed their Dutch HBO/VWO do not need to take any of these tests.

1.2.2 Health Sciences

Admission to the program is possible for:

- Candidates with a Bachelor degree in a discipline relevant to the health sciences such as medicine, health sciences, (medical) biology, chemistry, pharmacy, human movement sciences, sociology, psychology, nutrition, dentistry and veterinary medicine, or a broad Bachelor's education with sufficient basic subjects in the abovementioned disciplines. In addition, candidates must have affinity with research, as demonstrated by their motivation letter.

1.2.3 Clinical Research

Admission to the program is possible for:

- Candidates with a Bachelor degree in medicine, biomedical sciences or medical biology, or a broad bachelor education with sufficient basic subjects in medicine and/or biomedical sciences and/or medical biology. In addition, candidates must have affinity with research, as shown in the motivation letter.

1.2.4 Infection and Immunity

Admission to the program is only possible for:

- Medical students (from the Netherlands or international students), who have successfully completed their Bachelor.
- Biology, biomedical sciences, biochemistry, veterinary medicine, pharmacy and molecular sciences (LUW) students (from the Netherlands or international students), who have successfully completed their Bachelor.
- HLO-BML (Higher Laboratory Education Biomedical Laboratory Techniques) students who have successfully completed their studies.

After a positive assessment by the Admissions Committee (see 1.3.3 and 1.4.2), the student is admitted to the Research Master program Infection and Immunity. However, the first tests for competence and suitability for the Infection and Immunity program are the (re)exam for the Summer Course I and the interim assessment (Mid Term Review) of the first research project of the Research Master program Infection and Immunity. If the student does not pass the (re)exam of the Summer Course I, or if the interim assessment of the first research project is negative, the student receives the advice to stop the study, because the student shows insufficient capacities to successfully complete the program in the future.

1.2.5 Molecular Medicine

Admission to the program is only possible for:

- Candidates with a Bachelor of Science degree in one of the biomedical sciences (such as biology, biochemistry, biomedical sciences)
- Candidates with a Bachelor of Science degree from a Dutch higher professional program in biomedical laboratory techniques (HBO-BML)

Admission to the program is also possible for medical students who have successfully completed their Bachelor program and who have shown to be interested in biomedical research. For foreign candidates study results already achieved are used in the assessment: they must have a minimum grade point average of 80%.

1.2.6 Neuroscience

Admission to the course is only possible for:

- Candidates with a Bachelor of Science degree in one of the Life Science disciplines
- Candidates with a Bachelor of Science degree in psychology with demonstrable basic knowledge in Life Sciences
- Candidates with a Bachelor of Applied Sciences with a GPA of 8.0 for the entire degree program

In addition, Candidates have passed their admissions examination with 7.0 or more

1.3 Admissions Committee

1.3.1 Health Sciences.

The Admissions Committee of the Research Master program in Health Sciences for external candidates with a different study background than Medicine at the Erasmus MC consists of a program director of a participating department in the Netherlands Institute for Health Sciences (NIHES) and a program coordinator. The Health Sciences and Clinical Research Admissions Committee for medical students consists of the Program Directors of the two programs, lecturers who are closely involved with the program and a program coordinator.

1.3.2 Clinical Research.

The Admissions Committee of the Research Master program in Clinical Research for external candidates with a different study background other than Medicine from the Erasmus University consists of the program director or a member of the advice council of Clinical Research and a program coordinator. The Health Sciences and Clinical Research Admissions Committee for medical students consists of the Program Directors of the two programs, lecturers who are closely involved with the program and a program coordinator.

1.3.3 Infection and Immunity.

The Infection and Immunity Admissions Committee consists of the Program Director (or Deputy Program Director), the Scientific Director (or his or her Deputy) and key lecturers closely

involved in the program. The presence of three members and consensus is required for admission to the program.

1.3.4 Molecular Medicine.

The members of the Admissions Committee are the board members of the Research Master program, the Program Director, and where applicable a course coordinator. The presence of at least two members and consensus is required for admission to the program.

1.3.5 Neuroscience.

The members of the Admissions Committee are the board members of the Research Master program, the Program Director, and where applicable a course coordinator. The presence of at least two members and consensus is required for admission to the program.

1.4 Admission procedure

1.4.1 Health Sciences and Clinical Research

A written selection procedure is applied for external candidates with a different study background than Medicine from the Erasmus University who apply for the Research Master program in Health Sciences. The application documents of these students will be assessed by the Admission Committee. For medical students, an interview can be part of the admission procedure. If there are insufficient places on one of the Health Sciences or Clinical Research Masters suitable candidates will be offered a place on the other Master.

The applicant will receive a written response within six weeks with the outcome of his or her application.

1.4.2 Infection and Immunity

All medical students at the Erasmus MC who write an application letter are invited for an interview. A written selection procedure is first applied for the other candidates who apply for the Research Master program. The application forms of these students will be assessed by the Admissions Committee. On this basis, selected students are invited for an interview. The applicant will receive a written response within six weeks of the interview with the outcome of his or her application.

1.4.3 Molecular Medicine

Candidates who meet the selection criteria listed under 1.2 can be invited by the Admissions Committee for an additional admission interview (in person or online) and an entrance examination. Admission is decided based on results achieved in previous education, the result obtained in the entrance examination, the references, and the personal motivation of the candidate, as presented in the written motivation and/or the individual admission interview. The Admissions Committee determines whether a student is admitted to the program. The applicant receives a written notification of the outcome of his or her application within six weeks, unless the entrance exam has not yet been taken at that time.

1.4.4. Neuroscience

Admission is decided based on results achieved in previous education, the result obtained in the entrance examination, the references, and the personal motivation of the candidate, as presented in the written motivation and/or the individual admission interview. The Admissions Committee decides whether a student is admitted to the program. Rejection or admission to year 1 of the Neuroscience Research Master program is communicated in writing. At the request of the student, within a week of the result, the rejection is also further explained in a personal conversation and/or in writing. The applicant receives a written notification of the outcome of his or her application within six weeks, unless the entrance exam has not yet been taken at that time.

2. Assessment

2.1. Interim exams

2.1.1 Health Sciences and Clinical Research

Interim exams are taken during the module or at the end of the block. The learning environment of Canvas and the NIHES website contain information about which subjects interim exams are given. For certain subjects or sections of subjects an attendance obligation applies. In case of an attendance obligation for the entire course, the upper limit for absence is 20%. EC points are only granted if the attendance obligation has been met and a sufficient result has been obtained on the interim exam.

2.1.2 Infection and Immunity

The compulsory courses Summer Course 1 & 2, Winter Course 1 & 2 and Population Dynamics in Infection and Immunity are concluded with a written exam in any case. Students are allowed a maximum of 20% absence. For the whole I&I program applies that absence is allowed only after motivated sign out, and in consultation with the director of the program (in this case the Program Director or managing director). In principle the student is present, the 20% is the upper limit for absence in the event of any non-preventable absence. EC points are only awarded if the obligation to attend has been complied with and a satisfactory result is obtained for the examination if the course has interim exams. The student must be available to attend the compulsory courses and research outside of the timetable free periods in the timetable of the I&I Master program.

2.1.3 Molecular Medicine

All course components of the Molecular Medicine program are tested as explained in the study guide. Attendance is obligatory for a number of subjects. Students are only allowed to be absent for a maximum of 20% after motivated sign-out to the program coordinator and/or the relevant course coordinator. EC points are only awarded if the obligation to attend has been met and a satisfactory mark has been awarded for a test.

Access to year 2 of the Molecular Medicine Research Master program. Achieving 40 EC points of year 1 gives right of access to the following second year of the Molecular Medicine Research Master program.

2.1.4. Neuroscience

For all course part in the program (i.e. modules, workshops, labtalks and seminars) an attendance obligation applies. Students are only allowed to be absent for labtalks and seminars for a maximum of 20% after motivated sign-out to the program coordinator and/or the relevant course coordinator.

Progress and assessment in year 1

- a. Year 1 consists of various modules, each with a period of approximately 3 up to and including 8 weeks, in which periods the various components of the neurosciences are dealt with compactly. Modules are coordinated by a module coordinator. In addition in year 1, a research proposal is prepared and initial experiments are carried out for that purpose, under the direction of the student's research supervisor.
- b. The applicable EC points for each module are awarded afterwards if 60% of the maximum score to be obtained for an examination has been obtained. A second chance is offered for each module if an insufficient result is achieved.
- c. During year 1, the student is expected to be present at weekly work discussions at the department of Neuroscience, and at other scientific meetings and seminars. The EC points for this are awarded by the program director. If a student is insufficiently present (up to 20% absent) at these meetings he or she will be addressed in order fulfill this obligation at least three months before the end of year 1 by his or her research Master coordinator or the Program Director.

At the end of year 1, the student will submit a written research proposal, and give an oral presentation. An assessment committee, consisting of two research supervisors with ample experience in research supervision, will be present at the presentation and may ask the student questions following the presentation. The Assessment Committee decides on the grade for the research proposal and presentation, where the view of the research supervisor is explicitly taken into account.

Access to year 2 of the Neuroscience Research Master program. Achieving the 60 EC points of year 1 gives right of access to the following second year of the Neuroscience Research Master program.

Progress and assessment in year 2

- d. In the second year at least 10 EC points must be obtained by following workshops. Examination is done by the various workshop coordinators in accordance with the provisions that also apply to the examination of the modules in the 1st year. Practical skills and research technical components of the neurosciences are taught compactly at these

- workshops. Workshops are coordinated by a workshop coordinator. In addition, at the end of year 1, the proposed research is conducted and reviewed under the supervision student's research supervisor.
- e. During year 2, the student is expected to be present at general and specialized (work) discussions at the department of Neuroscience indicated by the research supervisor, and at other scientific meetings and seminars. The EC points for these are awarded by the program director. If a student is insufficiently present at these meetings he or she will be approached by the Master of Science coordinator or the program director at least three months before the end of year 2 to discuss how the obligations can be met.
 - f. Substitute education is possible according to the conditions as set out in 4.1.4

2.2. Resits

2.2.1. Health Sciences and Clinical Research

Each interim exam is subject to a maximum number of attempts of three times. After the third attempt the student can submit a motivated request for an extra resit to the Examination Board. There are two regular exam times per year: an exam and a re-sit. A third examination opportunity is only organized during the current academic year if at the end of the current academic year the student can and wants to graduate and has already used the other two exam opportunities in that academic year, or can reasonably prove that he or she was unable to do so. The procedure for a resit for the scientific research is recorded in section 2.2 of the TER.

2.2.2 Infection and Immunity

There is a maximum number of three attempts for each exam. All exams may be retaken, even if a sufficient mark was obtained, after which the highest mark is valid. This can only take place if a re-examination is organized for the students that have earned an insufficient mark.

2.2.3 Molecular Medicine

Students are entitled to one resit per year, per test.

2.2.4 Neuroscience

Students are entitled to one resit per test. This also applies to the end products of the first and second year (end product 1st year: the research proposal and the presentation of the research proposal, end product 2nd year: the Master thesis and the defense of the Master thesis). If the 60 EC points for year 1 and year 2 are not obtained, in individual cases at the written request of the student, if possible, supported by his or her research supervisor and due to special circumstances, a resit can be offered at the discretion of the Examination Board. If a student, even after a possible resit, has not passed the final exam of the first year access to the second year of the program is denied.

2.3. Master of Science (MSc) thesis

2.3.1 General

The program is concluded with the defense of a Master of Science (MSc) thesis. The thesis is in the form of a report written by the student alone that in principle can be submitted to a peer-reviewed international journal as a scientific paper. The Master thesis must demonstrate that the student has the skills to collect data and to present results, and has sufficient knowledge to write a scientific article. Students must also respond to comments on the master thesis by internal and external reviewers, as if responding to a peer review in an international peer reviewed journal. Submitting the manuscript for publication is not required, but is an aim.

2.3.2 Health Sciences

The master thesis will be evaluated by the research supervisor and an independent evaluator. This final assessment is made by the Program Director. This final assessment is enacted by the program director of the specialization followed by the student. The students must present their thesis to the research group of the department where they completed their research project.

2.3.3 Clinical Research

The MSc thesis will be assessed by the research supervisor, at least one member of the Clinical Research Advisory Board and an independent evaluator after the defence. The students must present their thesis to the research group of the department where they completed their research project.

2.3.4 Infection and Immunity

The master thesis will be assessed by the research supervisor and three reviewers of which one external reviewer. Defense of the MSc thesis consists of oral presentation of the objective, the methods used (or to be used), results and conclusions of the research. The final result of the labwork, assessment of the thesis, the presentation and defence will be reported together to the Educational Director and will lead to a final mark.

2.3.5 Molecular Medicine

The Master thesis contains a detailed introduction and 'Materials and Methods' section that is more extensive than required for a scientific article. The manuscript of the Master thesis will be assessed by the research supervisor, an independent assessor and the coordinator of year 2 of the master program. Defense of the MSc thesis consists of an oral presentation of the objective, the results and conclusions of the research, followed by discussion of the contents of the thesis. The final result of the evaluation, presentation and defense determines the final grade for the Master of Science thesis.

2.3.6 Neuroscience

For Neuroscience, the Master of Science thesis and oral presentation, the rebuttal and the revision of the Master of Science thesis are assessed by at least 2 independent. An

independently written rebuttal on the review of the Master of Science thesis must demonstrate that the student can defend his or her research, research results and conclusions and / or assess their value. The review and rebuttal procedure can lead to an overhaul of the Master of Science thesis.

3 Programs

3.1.1. Health Sciences, 2 years full-time 2020-2021

Research Master of Science in Health Sciences - 120 EC points - 2020-2022

	<i>Onderzoeksopzet - 7 EC(70%)</i>	
	<i>presentatie - 3 EC (30%)</i>	
Total Year 2		60.0

3.2 Research project and supervisor allocation

3.2.1 Health Sciences and Clinical Research

After admission to the program the Health Sciences students are assigned a supervisor. Clinical Research students are allocated an advisor from the Advisory Board Clinical Research. Together with the student the advisor looks for a research position and supervisor. The supervisor will supervise the student in his or her research project. The supervisor is preferably a professor or senior researcher. The supervisor can delegate the practical supervision to one of his or her employees, but remains ultimately responsible. In consultation with their supervisor and with the Program Directors students may be permitted to do a research project abroad.

3.2.2 Infection and Immunity

The students, if desired, are assigned a supervisor after admission to the program. This supervisor will supervise the student in his or her research project. The supervisor is an assistant professor, an associate professor or a full professor. In addition, the student is appointed a reviewer, as a rule from the group of core lecturers of the study program, who co-assesses the research proposal, the Mid Term Review and the final report. In principle the research projects take place within the Erasmus MC. In consultation with the Program Director students can (preferably) follow two research projects of six to twelve months that add up to 18 months together. As an alternative, they can take one eighteen-month research project, with a preference for part of it being followed at another lab. The first research project always takes place within the Erasmus MC in order to properly assess the practical skills of the student. In consultation with the Program Director the second of the two research projects may be done in a Dutch institution other than Erasmus MC, or abroad. A (research) research project is only performed outside the Erasmus MC if it is necessary for progress of the research project and/or if it is in the student's interest. The institute where the student is going to should be of comparable scientific quality to the Erasmus MC. There should be sufficient guarantee that during the research project abroad the student can count on intensive support from the research supervisor within the institute where the student follows the research project. Furthermore, there must be sufficient expertise within the Erasmus MC in the field of research to which the project relates.

After 2 to 3 months an interim assessment of the student and the quality and quantity of his or her work during the research project, the Mid Term Review (MTR), follows. A report is made of this. This assessment must, if necessary after reassessment, be sufficient to successfully complete the research project.

3.2.3 Molecular Medicine

Research projects must be approved by the program director. A research project abroad is only considered if it is necessary for progress of the research project and/or if it is in the student's interest. The foreign institution where the student is going to should be of comparable scientific quality to the Erasmus MC institutes participating in the Molecular Medicine program. There

should be sufficient guarantee that the student can count on intensive supervision by the foreign research supervisor during the research project. A research project abroad will only take place in year 2 of the program, and only when the student is following relevant courses of the Master of Science program.

3.2.4 Neuroscience

After a supervisor-student acquaintance period, a student-supervisor matching procedure is carried out where the NRMP (National Resident Matching Program) algorithm is used. The results of this matching procedure form the basis of the supervisor assignment. The supervisor is appointed by the Program Director (see general provisions). The appointment of the research supervisor will be valid for the entire duration of the course.

4 Education

4.1 Optional and compulsory education

4.1.1 Health Sciences and Clinical Research

The courses as defined in the prospectus are compulsory components of the Research Master program. During the program, the students are also offered a selection of optional courses. Changes can be made to the student's program in consultation with the program coordinator of student affairs and with the approval of the Examination Board.

4.1.2 Infection and Immunity

All modules and workshops in the program are compulsory. Certain modules can be replaced by equivalent education elsewhere in consultation with the supervisor and with written approval from the Examination Board. The student must keep written evidence of all compulsory and optional components of the program in a file, the "portfolio". This also includes all assessment forms, with the exception of the exam results. This file must be stored digitally in the "Digital Learning Platform" of the program and is accessible to the program at all times.

4.1.3 Molecular Medicine

All course components in the program are compulsory. Applications for exemption from course components are reviewed by the Examination Board if a written request is received from the student

4.1.4 Neuroscience

All modules in the program are compulsory. Changes can be made to the student's program in consultation with the Admissions Committee and with the approval of the Examination Board. If the replacement education is followed with sufficient result then the EC point can be awarded

for the workshops that were replaced on presentation of written proof. With regard to module followed elsewhere the related EC points count.

4.2 Exemption

The Examination Board may at the request of a student and after consultation with the Program Director and the relevant examiner waive a part of the program on the basis of knowledge or skills acquired in or outside of higher education

If the exemption is granted on the basis of education that is part of the Research Master Health Sciences or the Research Master Clinical Research, but that has been followed before the student was officially enrolled in the degree program, an exemption with retention of grade will be granted.

5 Practical information review

5.1 Registering for interim exams

5.1.1 Health Sciences and Clinical Research.

The students are automatically registered for the first round of the interim exams. Students must keep an eye on the resit date for any interim exams and register themselves. The date will be announced via the electronic learning environment or per e-mail. If a student cannot take the exam for which he or she is enrolled, the student must report this to NIHES in advance. Without a deregistration, a "no show" will be registered as a result for the missed exam, and the exam counts as an opportunity.

5.1.2 Molecular Medicine, Infection and Immunity and Neurosciences

The student is automatically registered for the relevant modules of the current academic year. Registering for individual modules and/or tests is not necessary.

5.2 Information about the form of an interim exam

An overview of the subjects that are examined can be found in the study guide and/or the electronic learning environment. The demands for and the form of the interim exam are at the latest on the first day of the course listed on the website, in the electronic learning environment and in Osiris.

5.3 Graduation requirements

Achieving 120 EC credits entitles the student to the degree of Master of Science in the specific domain of the Research Master.
