WO Monitor 2013
• Goal: monitor start of graduates in the labour market

• Bi-annual research by IVA and VSNU

• Results used by ROA (SIS, school leaver information system), Studiekeuze123, Studie in cijfers

• Sample size:
  – national: population 37,676 / response 8,504 (22,6%)
  – Erasmus: Population 2,145 / response 444 (20,7%)
Key findings Erasmus University compared to other universities

• Graduates that find a job, do so within 2.4 months on average. This is relatively fast. Only the TU Eindhoven students are quicker with 2.1 month. The average is 2.8 months.

• Our graduates enjoy both the highest average monthly start income of 3.178 euro and median income of 3.000 euro. This is 600 euro a month above the average and 500 euro above the median.

• Eighty percent of graduates of the Erasmus would choose the same study again. Only TU Delft and Eindhoven score higher. The average is around 75%.
• Foreign exchanges score slightly lower than average.

• In comparisons between universities the differences between study programmes and sectors should be taken into account.
• Average gross monthly income (in €) of the alumni in the active labour force includes the income from a regular job and an additional job.

• Note: WUR has relatively more international alumni who find employment in countries with lower salary levels.
Average number of months between graduating and first job

Only alumni in the active labour force are included.
The median of the gross monthly income (in €) of those who are part of the active labour force. The gross monthly income includes the income from a regular job plus the income from an additional job. The median gives outliers less weight.
Would you choose the same study after all?

- **No study**
- Another study at another university
- Another study at the same university
- The same study at another university
- The same study at the same university

Internship abroad during study

![Bar chart showing internship and no internship for various universities.](chart.png)
The graph uses the CBS definition of the labour force.
Study programmes with n < 10 have been excluded.
• The graph shows the average gross monthly income (in €) of alumni who are part of the active labour force. The gross monthly income includes the income from a regular job plus the income from an additional job.
• There is a difference with the national slide because the Faculty of Philosophy has been excluded.
Average number of months between graduating and first job

- Only the alumni who are part of the active labour force are included.
- The Faculty of Philosophy has been excluded since n<10.
The median of the gross monthly income (in €) of alumni who are part of the active labour force. The gross monthly income includes the income from a regular job and income from an additional job. The median gives outliers less weight. The Faculty of Philosophy has been excluded (also in the total).
University education offers good perspectives on the labour market
