A quick guide to Online proctoring

Online proctoring means you will be remotely supervised during your examination. This is done by asking you to identify yourself prior to the examination and subsequently make a recording via the screenshare, webcam and microphone of your device and the camera of your mobile phone as a second camera.

What is online proctoring?

The goal
To make sure the examination takes place according to the rules and requirements without violations.

The software
EUR works with the software from 'ProctorExam'.
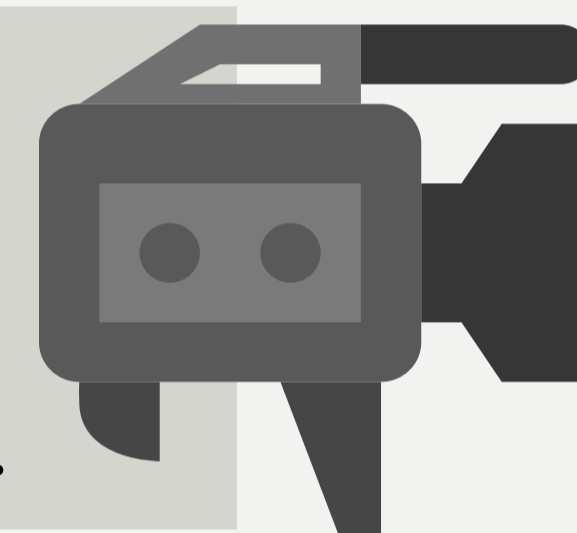

How does it work?

On the web
Online proctoring uses web-based software that can be embedded within an existing assessment environment.

Recording
ProctorExam works by recording screen images, video and sound from your computer and video from your phone during the exam.

Monitoring
The images and sound recorded during the examination will be monitored for irregularities.

Suspicious behaviour
Suspicious behaviour is flagged and reviewed by human proctors after the exam.

How is my privacy ensured?

Privacy protocol
The EUR has a strict privacy protocol and takes your privacy seriously.

Recorded data
Recorded data will solely be used for the purpose of online monitoring and supervising.

Proctors
Each examination will be evaluated by one or more invigilators (called proctors). From the start of the exam to finish.

Final review
The final assessment of the video footage is always done by EUR employees.

Storage
If there are no irregularities found, the data will be deleted after 12 weeks.

Objection
If you object to having your data processed, you should indicate this 10 days before the examination in an e-mail to the examination board.

More information on online proctoring can be found at MyEUR in the FAQ.

Do you have additional questions about online proctoring, contact proctoring@eur.nl
