

WO Monitor 2013

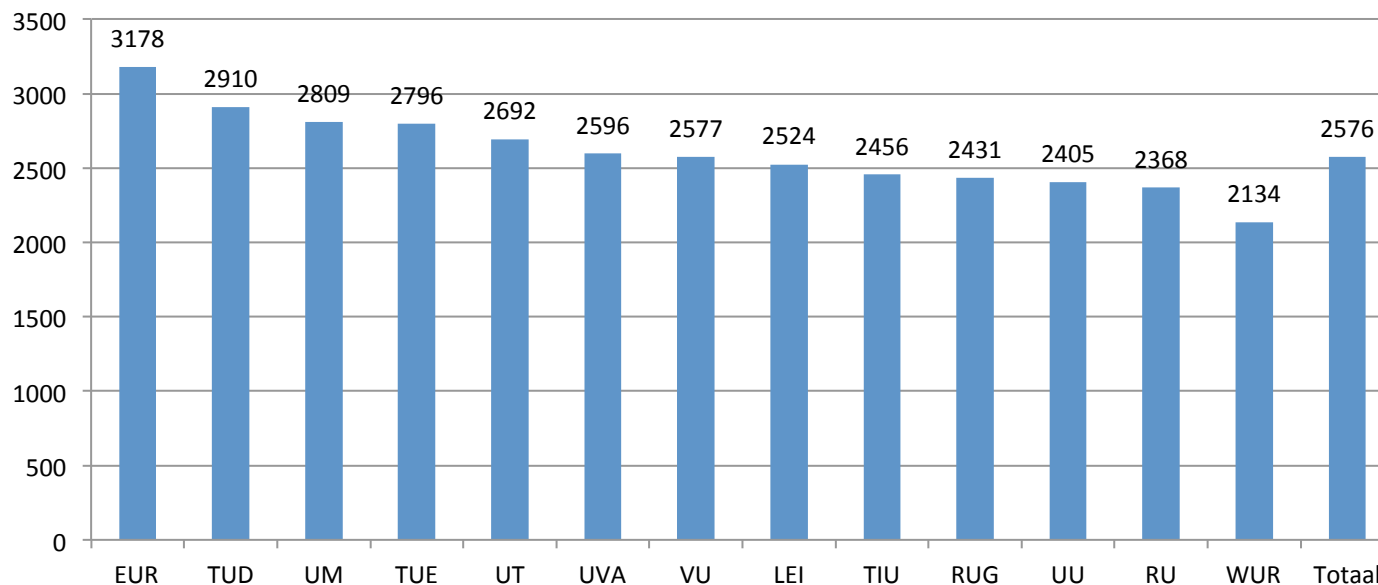

- Goal: monitor start of graduates in the labour market
- Bi-annual research by IVA and VSNU
- Results used by ROA (SIS, school leaver information system), Studiekeuze123, Studie in cijfers
- Sample size:
 - national: population 37.676 / response 8.504 (22,6%)
 - Erasmus: Population 2.145 / response 444 (20,7%)

Key findings Erasmus University compared to other universities

- Graduates that find a job, do so within 2,4 months on average. This is relatively fast. Only the TU Eindhoven students are quicker with 2,1 month. The average is 2,8 months.
- Our graduates enjoy both the highest average monthly start income of 3.178 euro and median income of 3.000 euro. This is 600 euro a month above the average and 500 euro above the median.
- Eighty percent of graduates of the Erasmus would choose the same study again. Only TU Delft and Eindhoven score higher. The average is around 75%.
- Foreign exchanges score slightly lower than average.
- In comparisons between universities the differences between study programmes and sectors should be taken into account.

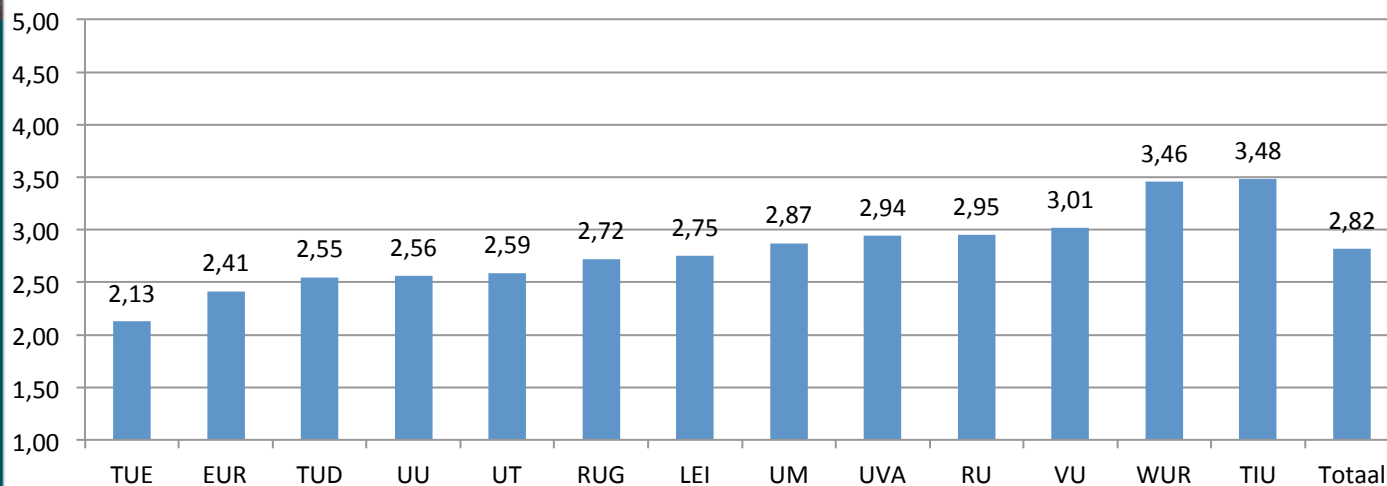

Average gross income

- No study
- Another study at another university
- Another study at the same university
- The same study at another university
- The same study at the same university

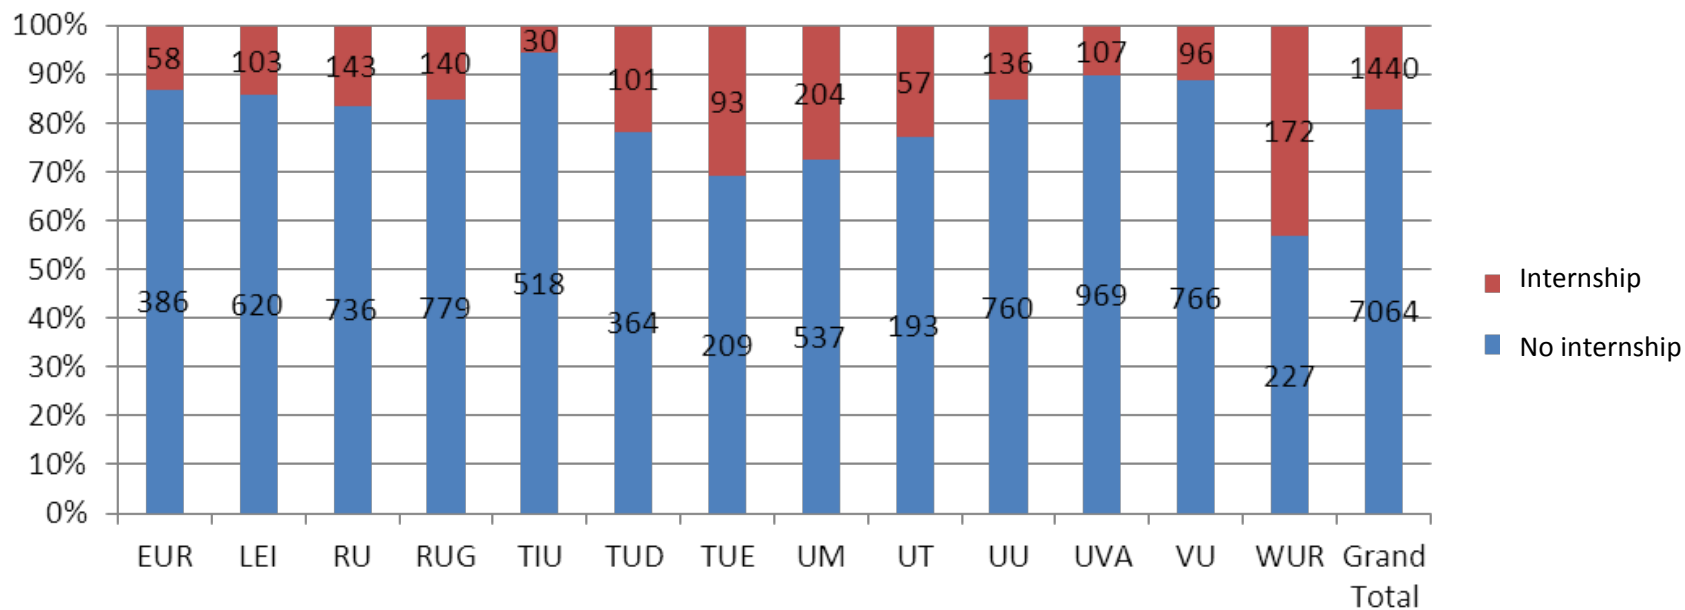

Exchange during study

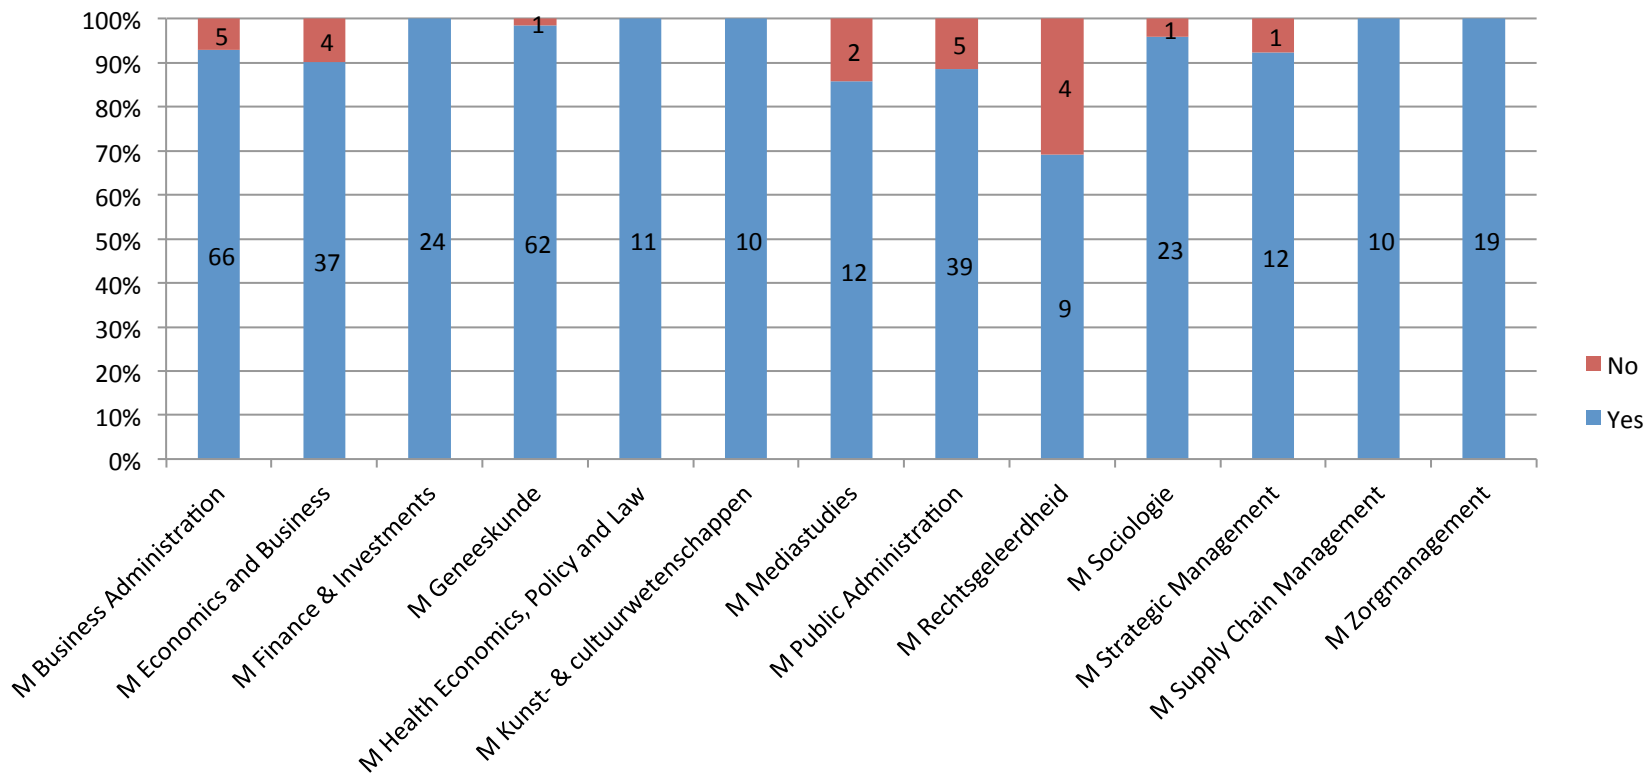

Internship abroad during study

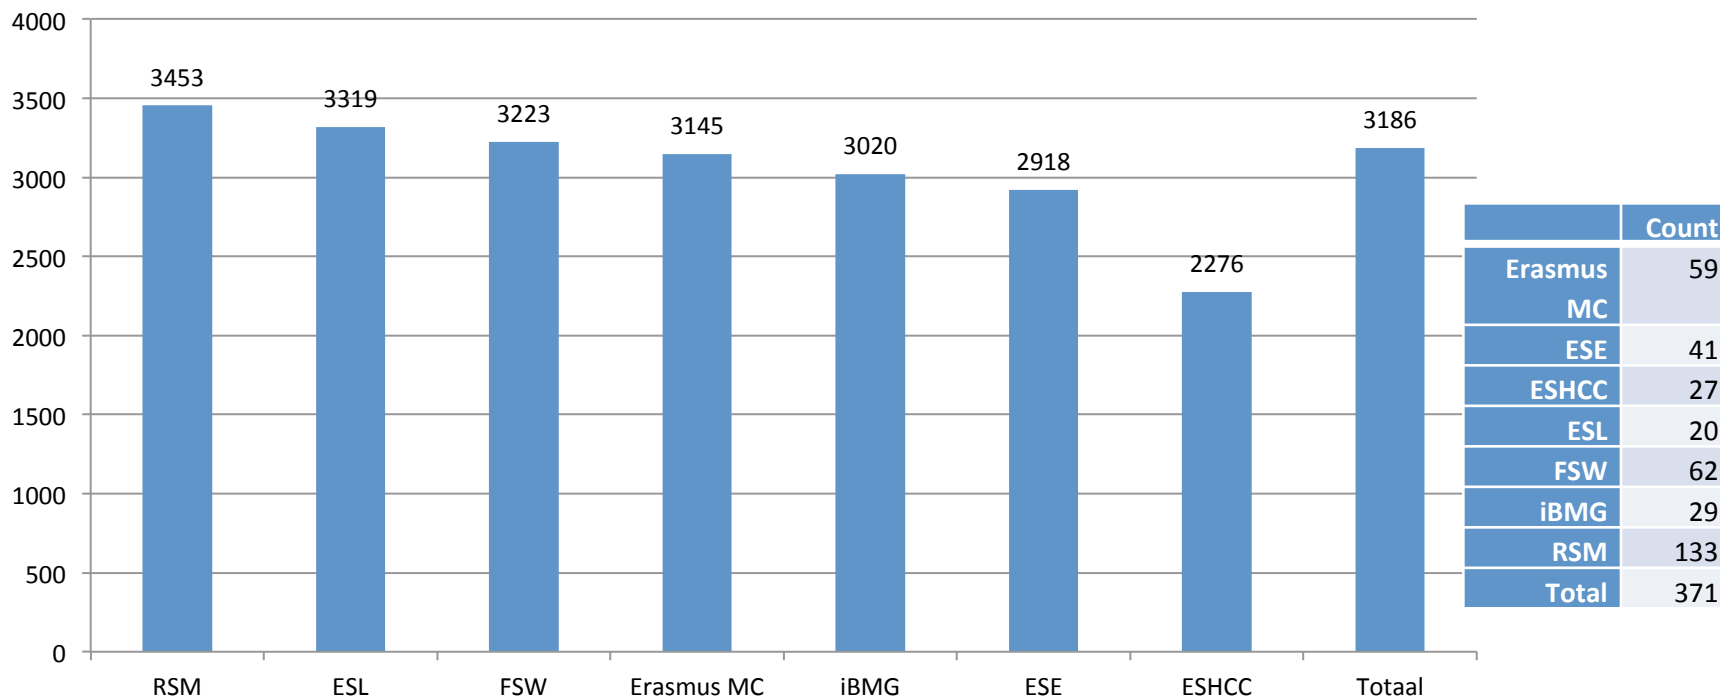

The ability to find a Job after graduating

- The graph uses the CBS definition of the labour force.
- Study programmes with $n < 10$ have been excluded.

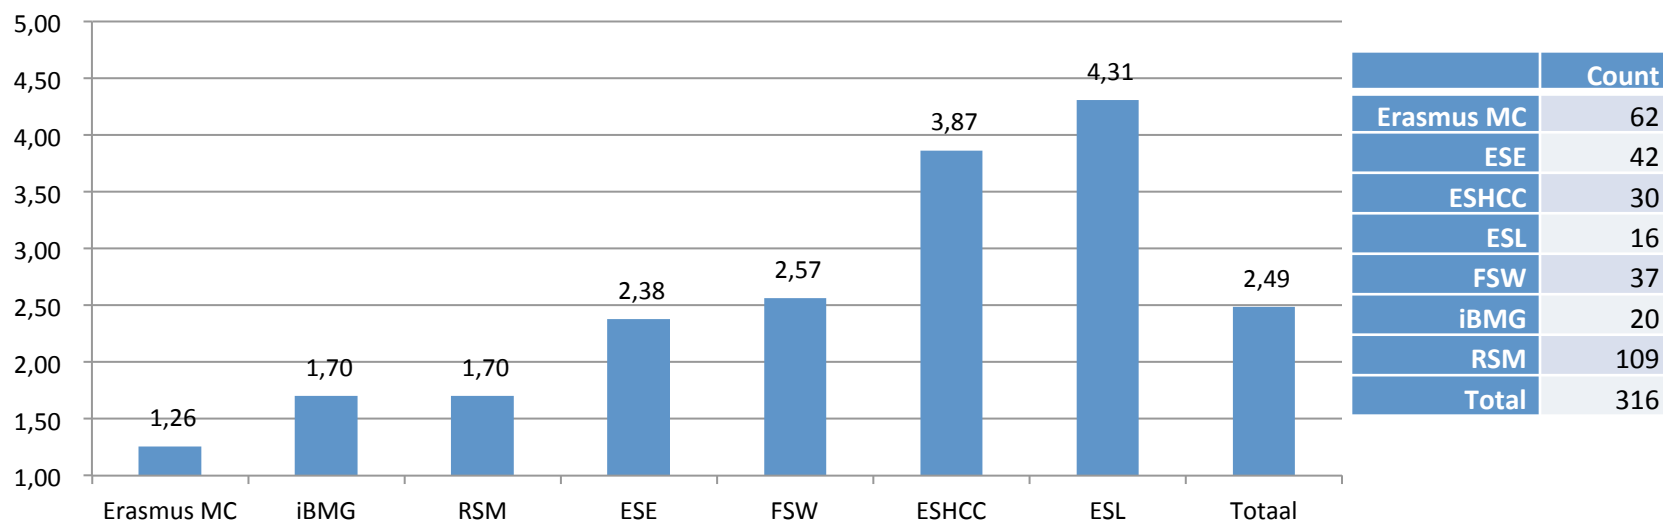

Average gross income

- The graph shows the average gross monthly income (in €) of alumni who are part of the active labour force. The gross monthly income includes the income from a regular job plus the income from an additional job.

- There is a difference with the national slide because the Faculty of Philosophy has been excluded.

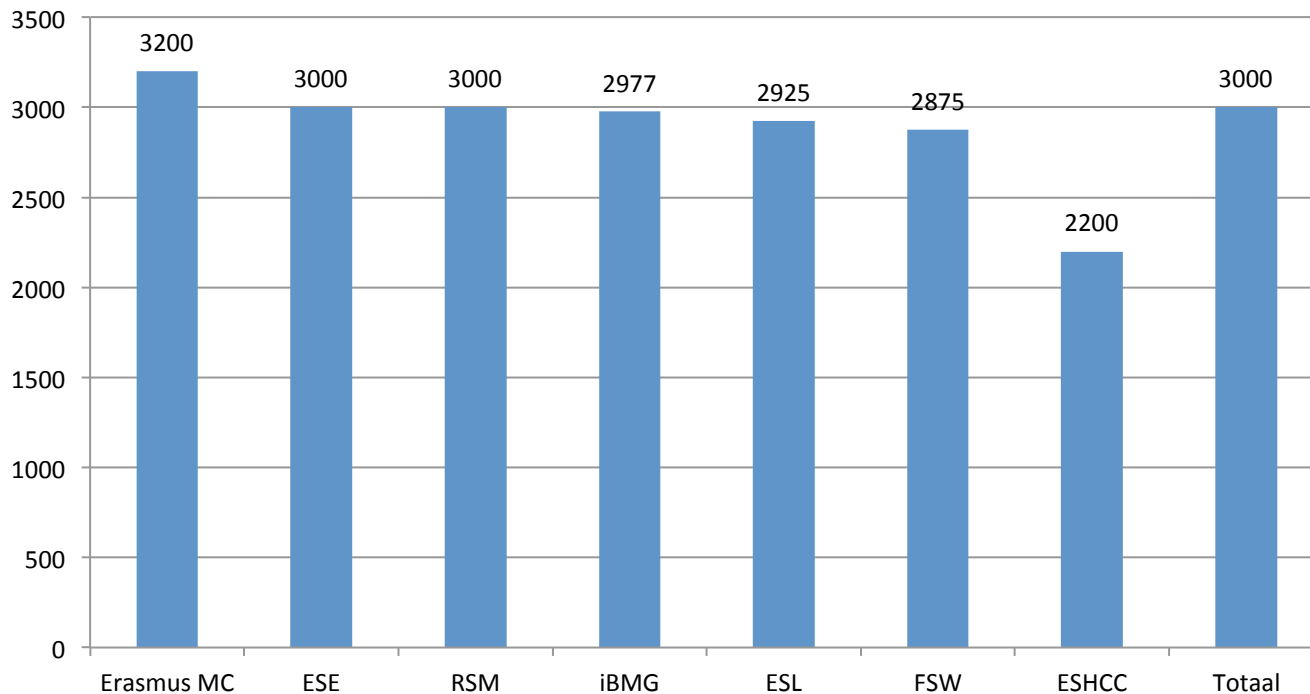

Average number of months between graduating and first job

- Only the alumni who are part of the active labour force are included.
- The Faculty of Philosophy has been excluded since $n < 10$.
