

Mapi is a leading global organization, offering evaluation and support of therapeutic strategies. With offices worldwide, Mapi provides high quality and efficient operations to help our clients secure product approvals and reimbursement, as well as addressing post- marketing requirements and late phase needs, meeting the needs of patients, physicians, regulatory authorities and health care technology purchasers.

We provide a dynamic, stimulating and rewarding working environment for ambitious and passionate individuals looking to join a global, world-class consultancy business.

Job Title: Research Manager

Location: Utrecht, Netherlands

Type: Permanent, Full time

Mapi wishes to appoint a Research Manager to assist in the growth of our strategic market access, health economics and health outcomes business.

The Position:

Reporting to the Director, Real World Strategy and Analytics (RWS&A), the Research Manager will provide line management and project leadership to a team of researchers. The Research Manager will use their market access, health economics and health outcomes expertise as well as applications to lead on project design and execution.

Responsibilities:

Your role will be exciting and varied; you will be involved in a range of responsibilities, including;

- **Project leadership:** Act as a primary client contact and project leader on a range of projects, ensuring that all deliverable are in scope and of predetermined standards
- **Project delivery:** Manage and perform aspects of research tasks (as project team member) allocated by project leads.
- **Team Management:** Manage line reports and project teams
- **Business development:** Work together with the Business development team to present Mapi RW&SA services to clients (with senior support); write proposals for projects involving standard methodology (with senior input). Identify new business opportunities and suggest relevant methodologies in a proactive manner.

Qualifications

- A Master's degree or PhD in economics, health policy, public health, epidemiology, bio-statistics or a related discipline
- Strong proven experience in a consulting, pharmaceutical industry, or academia (>3 years). Line management experience is a plus
- Excellent communication skills, both verbally and in writing as well as an established ability to work independently or as part of a team

- High level of organizational and project management skills combined with demonstrated self-motivation, business sense, sound judgement and an analytical approach
- Proficiency in planning and motivating others as well as superior interpretative and innovation thinking skills
